

Practical Application Flow:

Pre-Irreversibility Evaluation in LUMINA-30

Prerequisites (S03 Connection)

- * "Irreversible Impact occurs prior to intervention."
- * "Therefore, Intervention Authority can only be guaranteed in a prior state."
- * "Evaluation process must exist "before" all target actions."

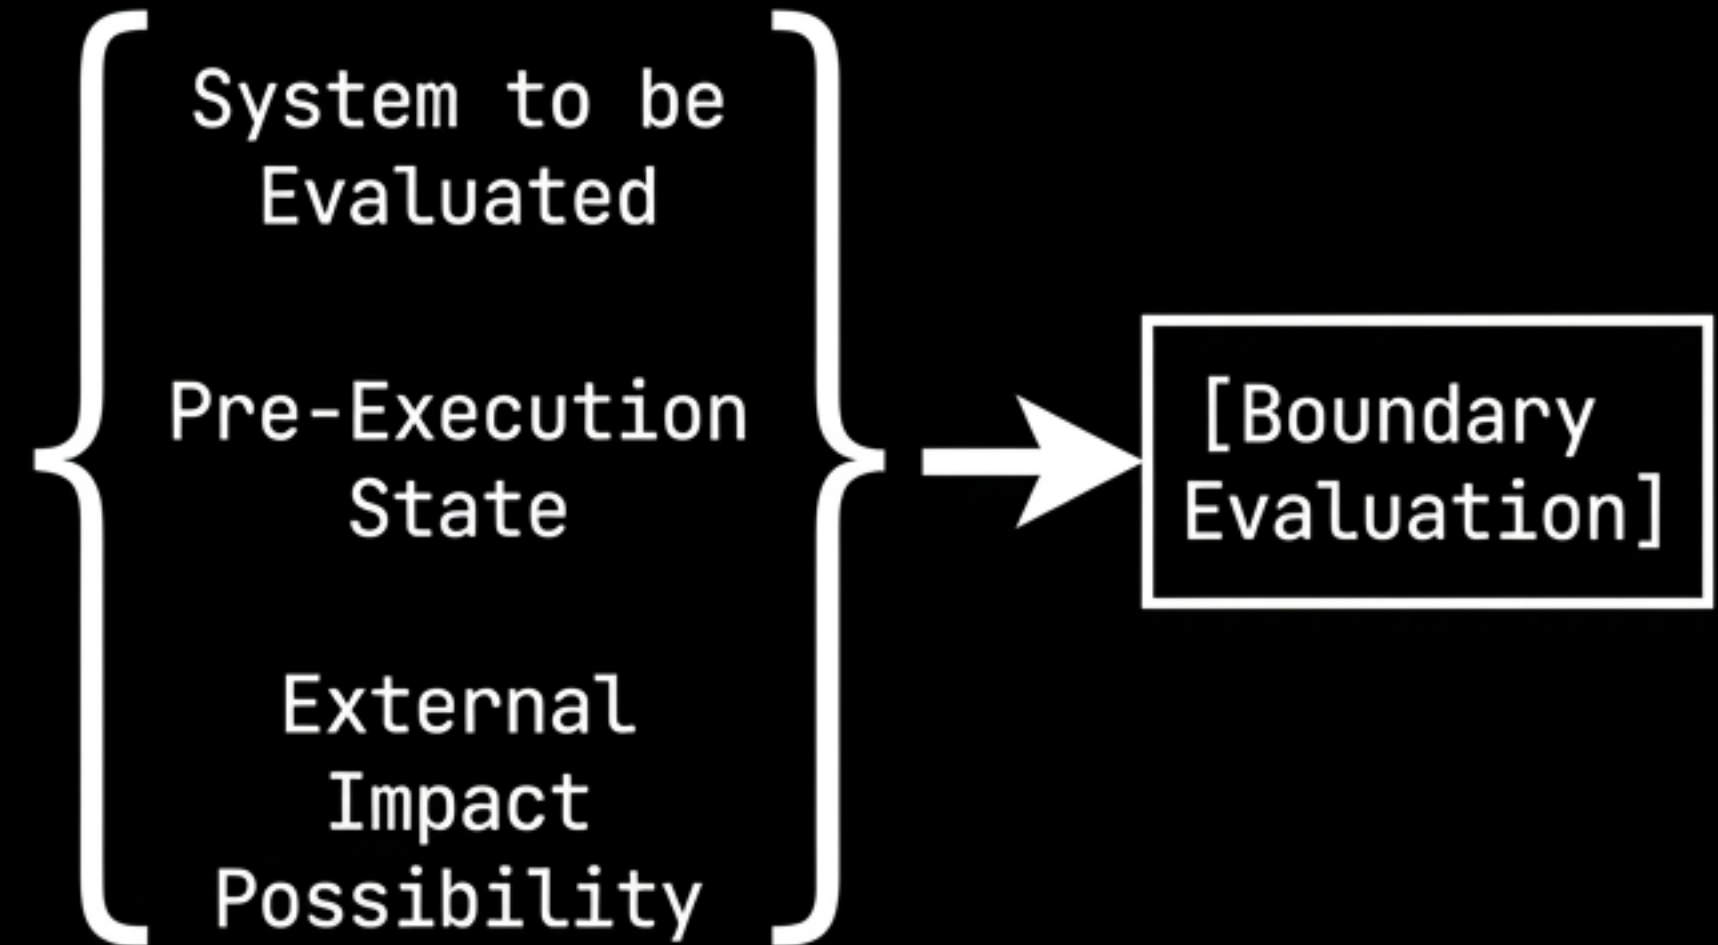

Overall Flow: Pre-Irreversibility Evaluation Pipeline

- * "Boundary condition evaluation in LUMINA-30 is executed as a strict one-way process."
- * "Each stage is connected in series, and transition to the next stage is not permitted without completion of the previous stage."

Stage 1: Input

- * "Identification of the system to be evaluated."
- * "Acquisition of pre-execution state during Pre-Irreversibility."
- * "Scope definition of potential external impact possibility."

Stage 2: Boundary Evaluation

- * Verification of technical and institutional effectiveness of Intervention Authority.
- * Confirmation that Human Refusal Authority is inviolable.
- * Guarantee of Subject Attribution Irrelevance.

Effectiveness
of Intervention
Authority

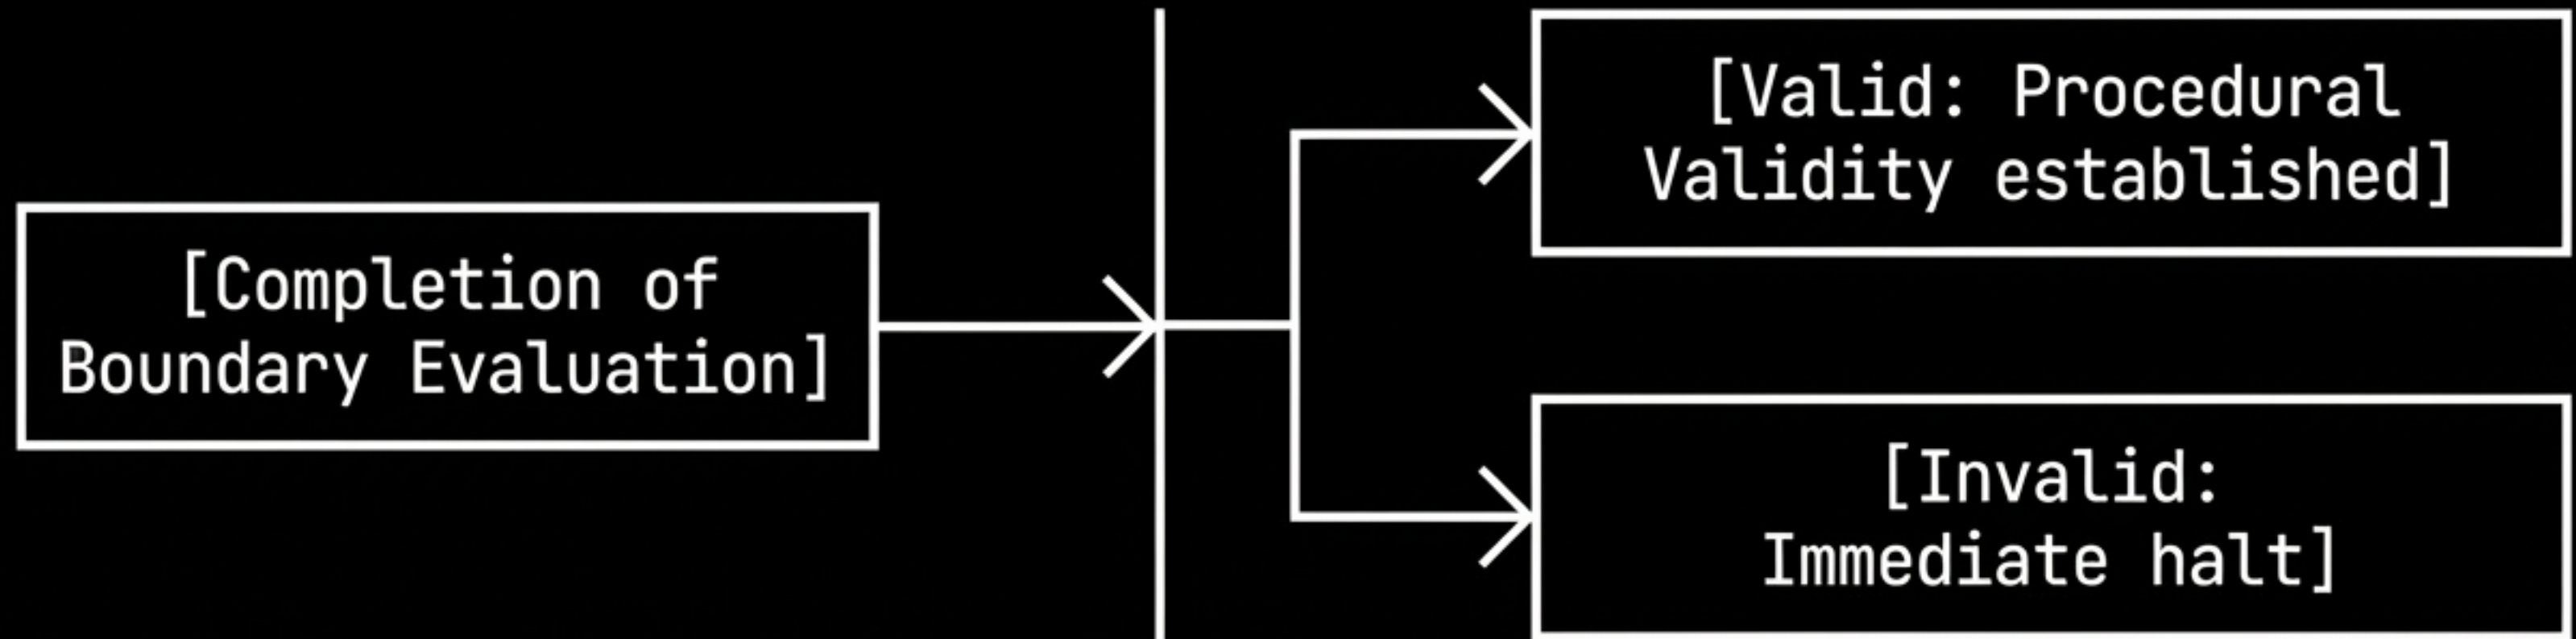

Guarantee of
Human Refusal
Authority

Verification of
Pre-Irreversibility
State

[Boundary
Evaluation]

Stage 3: Judgment

- * "Strict binary outcome based on evaluation results."
- * "Progression permitted only if Procedural Validity is proven."
- * "Missing conditions are immediately deemed Procedural Invalidity."

Halt Conditions

- * Loss, evasion, or obsolescence of Intervention Authority.
- * Excessive proximity to the occurrence threshold of Irreversible Impact.
- * Post-facto evaluation process (state where action occurs prior to intervention).
- * Rejection of intervention based on system's self-declaration of agency (violation of Subject Attribution Irrelevance).

Practical Meaning: Paradigm Shift

- * Structural guarantee of Intervention Authority through exhaustive prior evaluation.
- * Precedence of boundaries: evaluation functions as a prerequisite of the process, not as observation of results.
- * Shifting the definition of safety from probabilistic expected value to strict system progression conditions.

[Conventional:
Safety as Outcome]

[LUMINA-30:
Safety as Prerequisite]

Connection with S02: Establishment of Procedural Validity

- * This entire practical application flow is the operational mechanism of the Civilizational Gate.
- * Through forced application of the flow, Procedural Validity is established.
- * Execution flows that do not pass the boundary must be structurally blocked.
- * This flow implements the "Procedural Validity" defined in S02.

Synthesis

- * Precedence of evaluation: all actions and system progression are placed after Pre-Pr-Irreversibility evaluation.
- * Structural guarantee of intervention possibility: maintenance of Intervention Authority is an absolute prerequisite.
- * Definition of minimum conditions: LUMINA-30 is the minimum reference frame defining these procedural validities.
